# The AirKey Cloud Interface

What is the AirKey Cloud Interface?

The AirKey Cloud Interface (API) connects your software to the AirKey online administration. It allows you to control particular AirKey functions with your own software.

Setting up the interface

Your software needs to be adjusted to allow the AirKey online administration to communicate with your software. This could be done by your software integrator or a programmer.
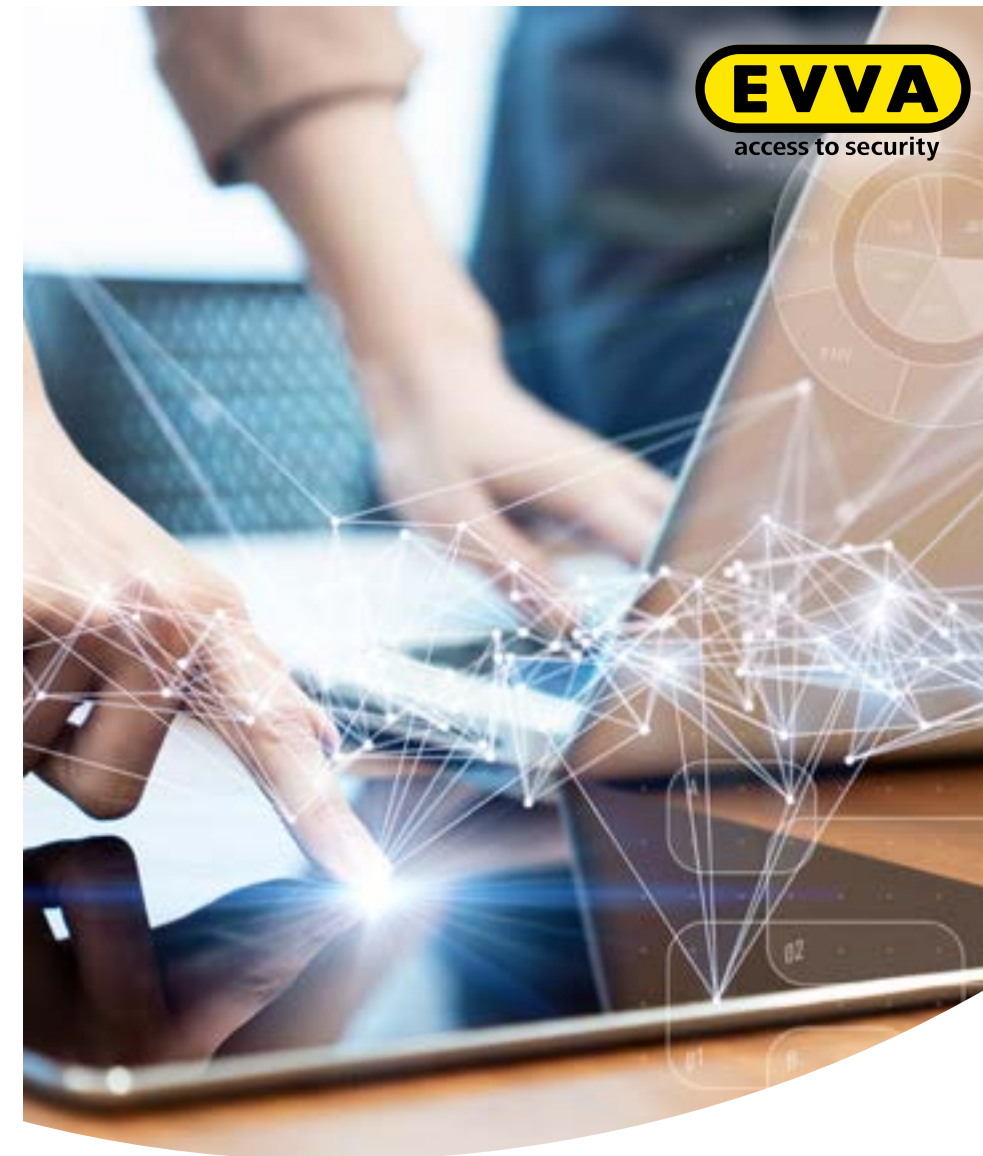

Activate the interface using KeyCredits

In order to activate the interface, you are required to make a single payment of 350 KeyCredits. Do this by using the KeyCredits AirKey Cloud Interface Card.

Tip: Make sure that you have enough KeyCredits and select "Receive important e-mail updates from EVVA." This will ensure that you are notified when you run out of KeyCredits or they expire.

The interface and security

API key

With an API key, the communication between AirKey and your software is secured. For security reasons, the API key is fully displayed only once. 10 API keys can be used for each access control system. That means you can securely connect up to 10 in-house software systems directly to the AirKey online administration.
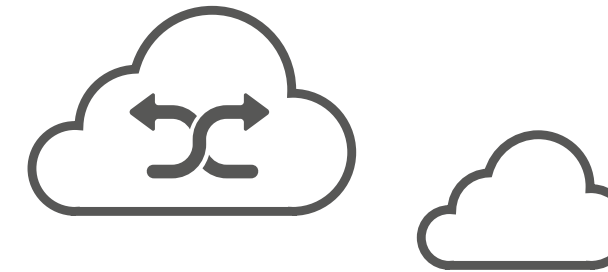

System event log

Operations carried out in the AirKey Cloud Interface are also recorded in the system event log of the AirKey system.

IP whitelist

Use the IP whitelist! Enter only the IP addresses to which the AirKey online administration can send commands.

Multiple sites

Flexible security
Providing security and easy access during servicing for infrastructure and energy facilities, which are spread around the world, requires a flexible, high-security access control system. AirKey is the right choice. With AirKey, you can send keys directly to your service technician's smartphone.

Shared office

Working in the AirKey era
The architect constantly has new freelancers, the advertising agency needs a new office. Managing shared offices is a big job. But not with AirKey. That's because AirKey sends keys to your tenants' smartphones as soon as the tenancy agreement is signed and automatically revokes access at the end of the tenancy period.

Gyms

Become a customer service champion
There are gyms everywhere. How can you stand out from the rest? With a unique service. What about an access control system, which turns any smartphone into a key, gives your customers access to your gym when they pay their membership fees and revokes their access at the end of the membership period?

AirKey is the right product for you

Keys are sent securely via the Internet, access is granted and revoked through the online administration.

With the AirKey Cloud Interface, you can even do this using your own software.

Guesthouses | Stand-alone hotels

Happy guests
As an owner of holiday apartments or a small hotel, you need to organise the handover of keys with each new guest. Might be a bit inconvenient. What if you could simply send the keys directly from your booking system to the guest's smartphone?

Residential building

Property management made easy
Repair work needs to be organised and tenants are moving in and out. As the property manager, you've got your hands full. Thankfully, you have AirKey to make your life easier. With AirKey, you send the keys from your administration software directly to the tenants' smartphones.

Mobile care services

High levels of care and security
Mobile care services are booming. Handing out keys, collecting them and making copies when they go missing is costly and inconvenient. It's time for an electronic access control system, like AirKey. When you create the roster for your nurses and carers, AirKey will automatically send the keys to their smartphones.

Emergency services

Safety under operational conditions
In emergency situations, speed is what counts. The event log sends a notification to emergency service teams who then rush to the scene with lights flashing. Wouldn't it be nice if the key for the site could be sent automatically with the notification? It's possible with AirKey.

Local communities | Clubs

Say goodbye to handing over the keys
There are lots of keys floating around in your community? They often go missing? Don't worry, you won't have that problem anymore. That's because with AirKey, you can send keys from your administration software directly to smartphones. You can send them to the new teacher, the music teacher, club members and many more.

Companies | HR software

Easy onboarding
It is likely that staff turnover will increase in the future. This means a lot more work for HR departments. But not necessarily. With AirKey, you can send keys from your administration software directly to employees' smartphones on their first day.
