

OEM

We provide you with the right solution

Innovator with a long tradition based in the heart of Europe

For **decades** EVVA has been a synonym for mechanical and electronic access systems that meet maximum technical standards. Established in **1919** as "Erfindungs-Versuchs-Verwertungs-Anstalt" (EVVA) in Vienna with a spirit that remains a vital part of our corporate philosophy to this day: we conduct our own research and development and we produce our innovative access systems in house.

Run as a **family-owned business**, EVVA successfully operates at the top end of its industry: to date the company has registered **200 patents**, we run **subsidiaries on 10 European markets** and our products are available from **distributors around the globe**.

We bring your demands to life

If required, we will produce your mechanical, individual parts or even complete assemblies, supply parts or components, use your or our own EVVA firmware, take care of functional tests, certification and staff training. Whatever our contribution to your economic success may be, we provide expertise, professionalism and reliability.

*"As a family-owned company
we are a synonym for
excellent product quality and
reliable partnerships"*

Stefan Ehrlich-Adám, CEO
EVVA Sicherheitstechnologie GmbH

Reasons to opt for EVVA

Innovation with tradition

A mechanical cylinder with temporary access function, an electronic access control system that opens doors using smartphones, a motorised cylinder that locks automatically – the power of innovation is in EVVA's DNA and it has been that way for a hundred years.

Providing solutions is our skill

We produce your mechanical parts or complete assemblies and develop the cylinder shapes you need on the basis of our many decades of experience in providing solutions as well as our expertise.

Highest quality parts made in Austria

We develop and produce mechanical and electronic locking systems in Vienna. We reliably and quickly take care of spare parts deliveries.

A steady flow of patents

The first EVVA patent dates back to 1937. EVVA received it for a cylinder padlock. Since then, EVVA has registered over 200 patents and the company continues to develop a steady flow of new ones.

Certification expertise

Our products meet the most stringent certification standards and form the solid basis for your product certificate.

Expertise developed since 1919

EVVA has been researching, developing and producing security technology since 1919. Excellent products, knowledge, experience and competence are the result.

The three pillars of our sustainability

Sustainability at EVVA is supported on three pillars: economy, ecology and people.

And EVVA always has a lot going on in all three areas. The ecological goal is an entirely oil-free production and the use of photovoltaic systems at other company sites.

The economic focus is on customer satisfaction and our social aim is geared toward employee motivation, healthcare and the protection of children.

Everything from a single source

EVVA develops and produces high-quality mechanical and electronic access systems at the company's headquarters in Vienna. Consistent orientation towards our customers generates solutions and products with individual benefits.

Spirit of pioneering and research

Like Gyro Gearloose, EVVA continuously demonstrates its ingenuity and technical expertise. The result is a steady flow of innovative mechanical and electronic access systems.

Producing at full speed

Researched, developed and produced in Vienna with cutting-edge machinery. Every year two million locking components leave the factory to be internationally successful.

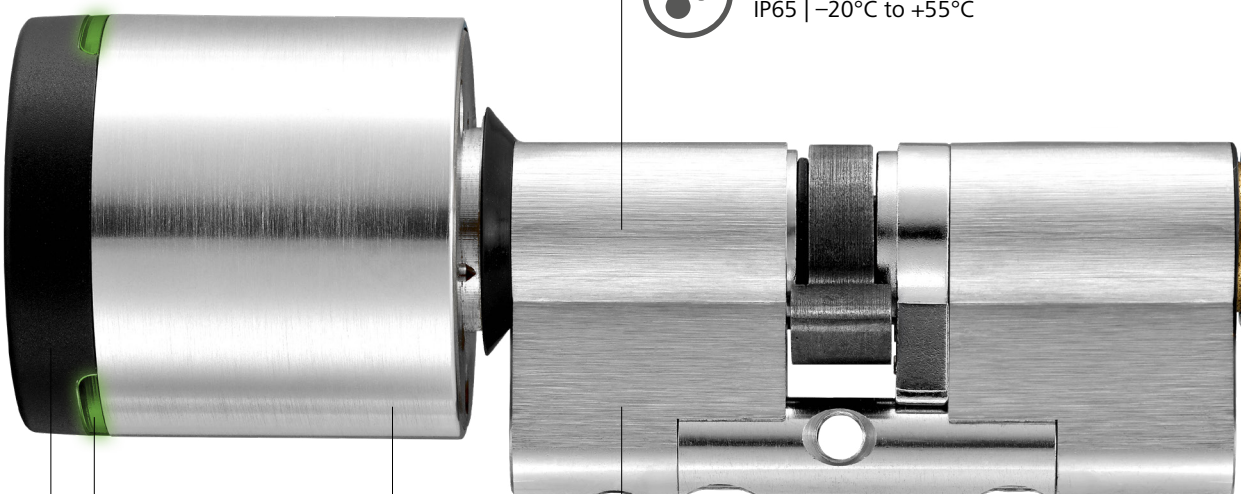

Thorough checks

At EVVA no products leave the premises without quality assurance. We test the functionality, resistance to wear and usability of our products at a dedicated test laboratory.

In-house developments

EVVA develops and produces high-quality electronic components in various variants. We can also develop components together with you so they meet the specifications you need.

Bluetooth
Contactless unlocking using Bluetooth.

Long battery life
Up to 20,000 access events

Suitable for use outdoors
IP65 | -20°C to +55°C

Audible signals

Visual feedback

Security feature
Emergency power device provides power in emergencies

Encrypted connection
Between motor and thumb turn (AES CCM 256 bit)

Drilling and plug pulling protection
The mechanical quality is outstanding and provides high degrees of burglary protection.

Easy installation and adaptation
Simply elongate, shorten or adapt components thanks to modular design (SY-MO)

High-grade mechanical systems
100 years of reliable expertise in electronic cylinders

Many certifications
Including: EN15684 and CE – to name only the two most important ones

Electronic padlock

In addition to high-grade electronic cylinders, we also provide electronic padlocks which can be adapted to your individual specifications.

Your own firmware or EVVA firmware?

The choice is yours

You decide whether to use your own or EVVA's firmware. There are plenty of arguments in favour of both variants. Read about them here:

EVVA firmware

Bluetooth technology

Components can be unlocked hands-free via Bluetooth.

Event logs

The firmware logs access events with 1,000 logs for the ring buffer and system data, such as "Battery empty" warnings. Event logs can also be deactivated for reasons of data protection.

Office mode

Fully or semi-automatic office mode at certain doors and at certain times. Automatically takes into account public holidays as well as summer and winter time. Manual office mode and shop mode available.

Wireless firmware update

Quick – simple – straight-forward – wireless updates.

And many more features...

OEM firmware

Your technology

You would like to use a different technology in your components? Your own technology? We can do that.

Your functions

EVVA's own functions are great! However, you would like to use different functions you have developed yourself on the basis of your software platform? We can also help you with this thanks to the EVVA OEM range.

Your certifications

Our products meet the most stringent certification standards. These also benefit your own certification processes as they make them simpler and quicker to implement.

Your benefits

When using OEM firmware you remain in control of your software, yet still benefit from EVVA's hardware strength and use your own firmware.
